

# Together, we can fight Breast Cancer

Breast cancer is one of the most common cancers affecting women of all ages. With the widespread use of screening mammograms, most breast cancer is diagnosed at an early stage which often allows for breast conservation. Premiere Oncology's board certified radiation oncologists, medical oncologists and therapists focus on each individual patient as a real person who is also somebody's wife, mother, daughter, grandmother and sister. We provide her and her family with support as well the latest information, and work together with the finest breast surgeons to ensure the success of the most state-of-the-art treatments in a private and confidential setting.
